Let's start!

Instruction: <https://github.com/RogalaPiotr/global-azure-2023>

GitHub vs. ADO

Azure DevOps

- Brownfield projects

GitHub

- Greenfield projects

Azure DevOps and Github Comparison

Topic	GitHub	Azure DevOps	Comment
Open Source	Preferred by the community. Offers both public and private repositories.	Preferred by enterprise. Offers both public and private repositories.	Even Microsoft hosts most of their open-source projects on GitHub.
CI/CD	New and relatively unproven, but easy to use.	Mature and feature-rich pipelines. Good integration with enterprise tooling.	Azure DevOps already has full integration with GitHub repositories, but GitHub Actions are neat and will improve a lot.
Project Management	Good if all your stuff is within GitHub	Mature and full-featured. Integrates with 1000+ extensions.	Azure DevOps is the choice here for any semi-serious project and beyond.
Code Repository	Heart and soul.	Third favorite child.	For hosting code repositories, nothing comes close to GitHub.
On-Premises	GitHub Enterprise	Azure DevOps Server	Either self-hosted version comes on 3872 floppy disks.
Reputation	GitHub has the community feels. Companies with open source projects on GitHub get free karma points.	The scent of TFS still lingers. This is enterprise territory.	Microsoft is definitely looking to borrow some reputation points from GitHub.

Thank you and see you again!
